Preliminary Identification of Risks

(Preliminary) Identification of Risks:

- 1) Not sure how to handle literal risks -- as in, essentially strangers going to one another's homes -- how to handle background checks, bonding/insurance, if there should be acceptance criteria for Pet Care Providers, etc.
 - 2) How we are going to determine and designate who is an "admin", and what that role will entail/require/allow
 - 3) What if users post inappropriate content on their personal profiles? This could be one role of admins -- to act as a moderator of sorts, but only make changes for actual things that are inappropriate
 - 4) Defining what is "inappropriate" in our context without going overboard and turning people off either... obviously, nothing that depicts cruelty to animals, bestiality (*not kidding, i've seen it get on some pet sites*), or personal attacks between users
 - 5) We are not sure how to go about implementing the scheduling/calendaring system yet
 - 6) We are not sure how to implement the private messaging system, yet -- or the "check-in" feature... but we are sure these are valuable features for our site/app
 - 7) We are not sure how to implement payment services -- privately between Pet Owner and Pet Care Provider somehow? Via our site/app?
-

- 8) We are not sure how to handle “dual-role users” yet -- those who want to register as both a Pet Owner and a Pet Care Provider, which is a perfectly logical thing some people may want to do
- 9) We are actually not sure how to actually DO, like ½ of this stuff -- so we will need “learning curve time” (we are not *complete* idiots, after all!)
